

NEURA Frontend Build Guide v1.0

This document is intended for Codex. It complements the Product Design Specification and defines implementation rules.

Stack

Next.js 15, TypeScript Strict, Tailwind v4, shadcn/ui, Lucide, Framer Motion, TanStack Query, Zustand, React Hook Form, Zod, Sonner.

Non-Negotiable Rules

Do not modify backend. Do not redesign UI. Build one sprint at a time. Use typed services. Reuse components. Handle Loading, Empty, Error, Success and Permission states.

Folder Structure

app/, components/{ui,layout,home,knowledge,sources,trust,activity,settings}, hooks/, services/, providers/, store/, lib/, types/.

Sprint Order

1. Foundation
2. Home
3. Investigation/Search
4. Knowledge
5. Knowledge Sources
6. Trust Engine
7. Activity
8. Settings
9. Polish

Codex Prompt Template

Objective: Build ONLY the assigned sprint. Allowed Files: specify exact folders. Forbidden: backend/, unrelated modules. Follow the PDS exactly. Do not redesign. Stop after completion and summarize changed files.

Stitch Prompt

Design NEURA, a premium enterprise AI Knowledge Operating System. Inspiration: Linear, Stripe, Glean, Vercel. Light theme, Geist typography, white canvas, restrained blue accents, calm enterprise aesthetic, Evidence First search, minimal cards, subtle shadows, 8pt spacing, 12px radius, no AI gradients or glassmorphism. Design MVP screens only.
